Dear Gardening Friend:

Why not start making "better health" deposits in the bank of your own and your family's health; as well as money deposits in the money bank? Both kind can and do come from the right kind and size of a fall garden. It's time now to think about starting your fall garden, planning for it, sending for the best of seeds to insure its success. What is most important is to have seeds in hand to take advantage of the first favorable planting season.

I want just a few words with you on the health and money saving value of the fall garden. One of the greatest drawbacks to good health here in our Southland, is the lack, not only of plenty of vegetable food for our tables but of variety. There is nothing wrong about "turnip salad" paton. There are many of our fall gardens are just a "turnip salad" paton. Too ourselves, but we don't want to go through winter and spring without cabbage, sprouting broccoli, beets, collards, carrots, kale, mustard, lettuce, tangerines, onions, radishes and spinach. All these are needed for a real fall garden; needed for health of the family; needed to cut down store bills.

Order vegetable seeds for your fall garden now! They will be in hand, ready for that favorable planting season that always comes. Order your farm crop seeds early also: wheat, oats, rye, barley, rape, Austrian peas, vetch, the clover, and grass seed for fall planting. You need some or all of them; we have them of the best quality obtainable anywhere at right prices. The same is true also of our nursery stock, bulbs and flower seeds.

This Hastings seed business, founded by myself 49 years ago, is a complete seed service for the South. I and my sons and associates are here ready to serve you promptly and well. Just as we have been serving our friends for the last 49 years.

Yours very sincerely,  
*H. G. Hastings*  
President

DATED

FOR SOUTHERN SOILS AND CLIMATE

Through our long association and close connection with Southern market gardeners, together with study of the special needs for Southern soils and climate, we believe you can depend on our strains and varieties of seeds which have been selected with these points in mind.

Our firm members are widely known in Seed Trade circles as quality growers and buyers. We never sac-

rifice quality and dependability in order to quote a cut price, but we believe we do offer the greatest crop producing values of all, regardless of price.

The special colored price lists are given to you with this catalog to give you the latest current market quotations on larger than the regular postpaid quantities. They are included for your benefit, Mr. Market Gardener. Use them and get the best value.

# HASTINGS' 100-BUSHEL OATS

**Best Heavy Yielding Rust-Proof Oats for the South**

Plant in early fall on well prepared land. Drill 2-3 bushels per acre.

Hastings' 100-Bushel is a true strain of Southern rust-proof oats. Planted in early fall, it grows off quickly and has proven almost as hardy as rye. Stools out strongly and makes the best grazing for cattle, hogs, horses and mules during winter and early spring. Our 100-Bushel is the heaviest yielder of all, the best main-crop oat to plant in the South. It outyields Appler, is a sound seeder and you should plant it for your main crop.

With the renewed interest in growing fall grains, Hastings' 100-Bushel Oats stands out as the leader. It comes in mighty handy for feeding mules and horses during the summer, when corn runs low. Oats are far less heating than corn anyway and better grain feed for working stock. Planted as a fall grain, it provides a cover-crop to prevent washing away soil and fertility during winter and spring rains. It's a grand crop for practically every farm and this is the biggest cropping variety for you to plant.

We grow the seed ourselves on the Hastings' Plantation, our finest selected strain, harvested and recleaned with the most modern machinery to take out weed seeds and light seeds, so every plant coming up is capable of vigorous growth and maximum yield. Write for our closest market prices when ready to buy. It will certainly pay you.

## FULGHUM EARLY OATS

Excellent for light soils farther South.

The best early oat with exceedingly heavy straw. A three-year test by one of the Southern Experiment Stations shows that it is eight days earlier than 100 Bu., and the yield per acre was 8 to 10 bushels less than 100-Bushel Oats.

Its greatest value is to prolong harvest season, where there is limited machinery equipment, and earlier harvesting allows your summer crop to be planted in time to make a heavy yield. Write for our closest market prices.

## APPLER OATS

Appler is a genuine rust-proof strain and a good main crop oats to plant every year. It's a heavy yielder and stools out nicely for winter protection, so is very hardy. If convenient to thresh the crop, it furnishes a splendid combination grain and hay feed. Write for market prices.

## ABRUZZI RYE

Southern Grown. We have grown Abruzzi Rye many years and do not hesitate to say that it is as far ahead of the old Southern Rye as the Southern is ahead of Northern Rye. Abruzzi is the best Rye for the South. It stools out quicker and heavier, quickly covering the ground and protecting its roots in winter. It can be pastured a month to six weeks earlier than other Rye or oats. Write for prices.

## Georgia Rye

Southern Grown. The old-time favorite for winter grazing in the South. Our Georgia Rye makes as fine pasturage, but not as much grain as our Abruzzi. Write for market prices.

## Winter Barley

There is a great increase in barley planting, especially by poultry raisers, who want it for winter green feed and grazing. Very easily grown through the South and sowed at last cotton or corn working, the only expense is the cost of seeds. All our Barley is recleaned and tested Southern grown winter barley. Broadcast 2 bushels per acre.

Beardless and Bearded.

Write for our best prices on quantity you want when ready to buy.

Hastings' 100-Bushel Oats

## WHEAT

Culture—Early fall planting is best. In early seeding, plant one bushel of seed per acre. After about November 15, it's better to use 1¼ to 1½ bushels per acre. Plant in drills, using the "open furrow" method, the same as for Oats. Easily grown in the South.

## NEW GASTA WHEAT

HASTINGS' PLANTATION GROWN SEED

Improved Blue Stem. Newest and finest strain of Blue Stem, beardless wheat, developed by the Georgia Experiment Station and being extensively planted now that it is so well known. Gasta is the kind we plant on the Hastings' Plantation because it has proven a heavier seeder and with stronger stems than the old variety. It better resists storms, seems to be hardier and surely makes more grain per acre. We recommend it as the best wheat for fall seeding. Write for our best prices.

## BLUE STEM OR RED MAY

Purple Straw. The favorite among Southern wheat growers. It has been the almost generally satisfactory beardless variety. It's a fine, rather early, productive wheat. Write for prices when ready to buy.

## FULCASTER BEARDED WHEAT

Bearded Wheat of the finest type grown. It's strong, vigorous and heavy yielding. It's extremely hardy, standing our severest winters without serious injury, and a safe, reliable variety to plant. Write for our best market prices.

## 5% Ceresan—Prevents Smut

New Improved Ceresan—For treating grain seed to prevent smut. Costs less than 3c per bushel of seed. Lb. treats 30 bushels. Postpaid—Lb., 75c. 5 Lbs., \$3.00.

# Southern Salvation

Most valuable, sweetest hay, cures well and retains a green color when dry. Plant northwestern grown seed in the upper South and even that must be the purest, free from weed seeds, possible to get. The Winter Cowpea. Remarkable winter legume. It resembles an English Pea in size of seed, Canada Field Pea in character of vine growth. It's a heavy yielder, can be grazed and will put on a good second growth with better stooing out. It makes splendid hay, excellent for turning under, a fine winter cover crop and soil improver. It grows waist high, can be planted by itself or with a light seeding of oats or rye to hold vines off the ground.

This "Winter Cowpea" will protect your soil, hold and increase soil fertility, furnish grazing for your livestock and make plenty of hay besides. Turned under, it makes wonderful green manure. Sow like Vetch, 20 to 30 pounds per acre. Lb., 25c. 5 Lbs., 75c. Write or wire for lowest quantity prices when ready to buy.

## 400 DWARF ESSEX RAPE

Description—Rape top growth looks much like Rutabaga Turnips but does not form a bulbous root. It grows 15 to 30 in high, making a splendid green feed and forage crop relished by all kinds of stock, but principally planted for hogs and poultry. It is also popular for "greens" on the table and is a fine substitute for turnip or spinach greens. Rape is hardy, standing any ordinary cold in the Cotton Belt or farther South. It is ready for grazing in 8 to 10 weeks from planting, with its broad, succulent leaves, and we know of no crop planted during fall and winter that will bring as great returns for such a little expenditure of time and money for seed.

Culture—Plow and harrow your land down fine. Plant any time from August to April. 10 pounds broadcast or 3 to 4 pounds per acre if planted in drills like turnips. If broadcast, cover the seed by a light harrowing. If there is a showery season Rape may be planted between the corn rows at the last working.

PRICES— $\frac{1}{4}$  Lb., 10c. Lb., 25c. 5 Lbs., 90c. Postpaid.

### QUANTITY PRICES

Market prices vary during the season and we cannot quote you closest figures at time of printing. We can supply field seed at very close prices and recommend that you write or wire us when you are ready to buy. This will save you money!

## Here's How to Have a Real Lawn

### When to Plant

Our finest lawns are made during cool months. As soon as weather cools off until early spring is time to sow seed. Allow grass to become established without freezing weather if you can. Where there are trees, establish grass before or after leaves fall. Lawn grasses, except Bermuda, may be planted all fall and winter until late spring—the earlier the better. Bermuda Grass will start growth only in warm soil and weather. Plant it from May through August.

### Prepare Soil Well

Spade or plow soil 12 in. deep. Remove rocks, roots and litter. Where shady there is frequently moss, showing acid condition. To correct this, apply 100 Lbs. of Hydrated Lime per 1,000 square feet and rake it in 2 or 3 weeks before planting seed.

Grass needs food and water. For soil to hold water and food, there must be plenty of humus or vegetable matter in the soil. For poor, sandy or heavy clay soils we must haul in woods earth or rich garden top-soil or we must add humus to the soil we have. Granulated Peat Moss and Peat Humus are the best and purest forms of humus. Soak good. Let soil settle before planting.

Apply 100 Lbs. of Pulverized Sheep Manure and 50 Lbs. of Bone Meal to each 1,000 square feet (50x20 ft.). Rake thoroughly, mixing fertilizer with soil and working the surface smooth and level.

### Seed Sowing

5 Lbs. of seed will plant 1,000 square ft. (50x20 ft.) of lawn with most grasses. Rye Grass takes 10 Lbs. Plant a plenty of seed to have a thick, velvety lawn. Sow seed carefully so

not to skip spots. After broadcasting seed, roll the seeded surface with a roller, or firm the surface in some other convenient way. Grass seed needs only to be pressed into a firm seed bed—not covered with soil.

### Bermuda Grass

The best summer grass in the South is Bermuda and it should be seeded in the summer in sunny places. Bermuda grass is brown in winter, so for a year-round green lawn with Bermuda, merely scratch Sheep Manure and Bone Meal into Bermuda sod in the fall or winter and broadcast Evergreen Mixture, Rye Grass or Kentucky Blue Grass over the closely mowed Bermuda sod, scratch it in with a sharp rake and roll it firmly and soak thoroughly. Green grass quickly appears and lasts until summer, when Bermuda crowds out the winter grass.

# Hastings' Famous Southern Lawn Grasses

By itself it makes a delightful green lawn, in sun or shade, all fall, winter and spring. It stands repeated mowing. Sow 10 Lbs. per 1000 sq. ft. (50x20 ft.) for lawn; 50 Lbs. per acre for pasture.

**SPECIAL**—One Packet Each of Hastings' Exhibition Mixed, and the finest new Swiss Giants—Alpenglow, Lake of Thun, Coronation Gold and Swiss White—\$1.80 worth of the greatest Pansies in existence, for just \$1.00. Now is the time to plant!

**CULTURE**—Prepare bed deeply and well. Soil with leaf mold and decayed cow manure gives best results. Seeds germinate in about 10 days and must not dry out during this period; coating with peat moss over the bed prevents drying out. Thin out or transplant to six inches apart in rows and cultivate frequently. During dry weather, water bed daily. July to September, January to March are the best times to plant, allowing plants to develop in vigorous condition. They need only light protection to stand our winters.

# Hastings' Huge Exhibition Hyacinths

## Largest of All Bulbs

Hastings' Bulbs are produced in the famous hyacinth soils of Hillegom, Holland, known the world over for healthy bulbs, easy to force and earliest to bloom.

**Culture**—These exhibition or artificially fed, extra large sized, bulbs are for growing specimen flowers in water indoors, for show competition and for the largest spikes and biggest flowers. For exhibition purposes use only deep, so-called Azalea pans or pots. Add some sheep or well rotted cow manure at bottom of pots. Bury pots in prepared trench of ashes outdoors or keep in cool dark place for 12 weeks and then about 50 degrees for a couple weeks until top growth develops. After this, bring to sunny window, give plenty of fresh air, and force growth as fast as you like. Use old or soak new pots in water 2 months before using for hyacinths; 5 in. pots for single bulbs.
